

TECNODUE Værkstedes maskiner

In addition to the standard machines, Tecnodue is able to carry special equipment at the express request of the customer. We then produced machines to solve the problems encountered by manufacturers of ventilation ducts, pipes for district heating pipes dual containment; but also equipment for welding and machining of components and details not concerning the world of pipes.

In this section are just a few examples of special machines made in recent years.

Tecnodue has always stood for the readiness and flexibility, combined with great technical ability, able to satisfy particular needs and solve various production problems.

PL ... DH – For district heating

Workshop Machines Welding suitable for segmented bends constructions with pipes for district heating pipes and dual containment

Splitting heating mirrors

Heating Mirrors suitable for with pipes for district heating pipes and dual containment

PL ... COR – For corrugated pipes

Workshop Machines Welding suitable for segmented bends and other fittings construction by means of using Corrugated Pipes

PT 2000

Butt Welding Machines suitable for Pipes up to d. 2000mm

PT 3130

The largest butt welding machine ever produced: it can be welded pipes with external diameter of 3130 mm!

Eccentric Reducing Tees Makers
